

Service unit

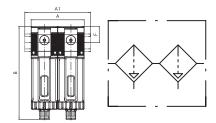

»SYNTESI« series

Art. No. 145369

Type No. 5613F10D103

Exemplary illustration

Two-part service units consisting of filter and depurator of the »SYNTESI« series. For all information on the relevant properties, please refer to the data sheets of the individual components.

Technical data

Series	Syntesi
Size	1
Max. input pressure	15 bar
Temperature range	-10 to 50 °C
Input	G 3/8
Output	G 3/8
Front and back port thread	G 1/8
Recommended flow rate at 6.3 bar	550 NI/min
Filter rating of the depurator	0 μm
Filter rating of the filter	5 μm
Condensate drain of the filter	RMSA semi-automatic
Condensate drain of the depurator	RMSA semi-automatic
Output air purity class according to IS 8573-1	O 1.7.2
Medium	Compressed air or other neutral gases
Housing	Technopolymer
Sealant	NBR
Bowl	Technopolymer
A	84.0 mm
A1	86,0 mm
В	148.0 mm
F	25.8 mm

Commercial data

Customs tariff number	84213925
Country of origin	IT
eCl@ss 5.1.4	27292890
eCl@ss 9.0	27292890

RMSA: drain with manual condensate discharge and automatic discharge at zero pressure.

RA: automatic drain with condensate discharge, independent of pressure and flow rate. Version conveys the draining by inserting the pipe having internal diameter 6 mm in the

lower port.
automatic drain with condensate discharge. Operates by pressure drop – requires variable air take-offs.

N.B. Besides the below mentioned codes, you can order elements composed at your will according to the key to codes.

GENERAL TECHNICAL DATA SUNTESI.

Syntesie is an important milestone achieved by Metal Work, the result of thirty years' experience producing air-treatment units. It has been studied in minute detail to obtain the best possible performance in a reduced space and with limited weight. The capacity is much higher than that of other units of the same size.

This modular unit features a very simple yet effective system that requires no brackets, stay bolts or yoke for assembling the elements. The basic version of Syntesi® incorporates numerous functions that are not provided or are only optional with traditional units. Examples are padlockable knobs, additional pneumatic ports on the front and back, flow options from left to right or vice versa, regulators with compensation system - which are accurate even when the upstream pressure changes, with rapid downstream pressure relief - full indelible marking, automatic condensate drain even in size 1, and 360° visual inspection of oil and condensate levels. The basic materials, technopolymer and nickel-plated brass have excellent corrosion resistance. An anti-corrosion version

is available with stainless steel components (screws, plates) or Geomet®-

ANTI-CORROSION VERSION

reated ones (regulator springs).

Differences compared to the standard version:

- stainless steel screws
- stainless steel plate for R, FR, V3V knobs
- Geomet®-treated regulator spring and filter-regulator

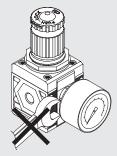

C1.4

RIEGLER

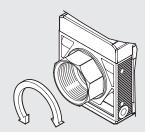

FIXING TO FRONT PORTS

ROTARY BUSHINGS

LASER MARKING

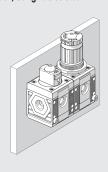

The following is marked indelibly on the body:
- Metal Work trademark

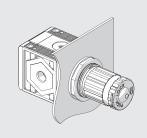

- Code
- Maximum pressure and temperature Degree of filtration or pressure range, where relevant
- Week and year of manufacture
- Atex categoryMade in Italy

MOUNTING OPTIONS

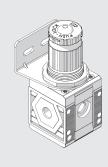

On the wall, using two screws

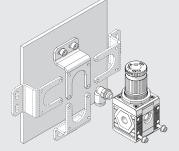

On a panel

Using knob bracket

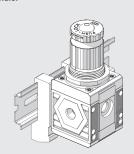

Using a bracket

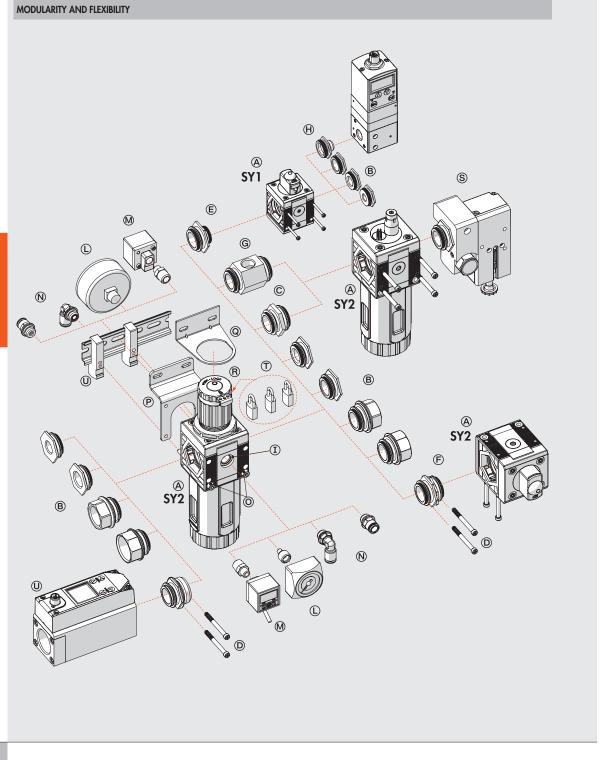

The bracket can be secured in any position, and the fittings can be mounted on the pressure gauge air intake at the back of the unit.

On a DIN EN50022 bar with the apposite adaptator

Page 6 of 10

GENERAL TECHNICAL DATA Syntesi®

C1 A

The various elements of Syntesie (a) can be connected to the air feed and delivery circuit using pneumatic nickel brass or passivated aluminium ports (B) and can be fixed together using nipples ©.

The nipples and ports are easy to remove by unscrewing the two front screws [®]. This solution has numerous advantages:

- Reduced overall dimensions.
- Free composition of multiple elements, without the need for brackets, stay bolts or yoke.
- The threads for the fittings are metallic, allowing high tightening torques, also for tapered threads.

 Maximum flexibility: a unit can be transformed at any time by adding an element or replacing a port with another one, e.g. 1/4" instead of 1/8".

- The air intake port can be the same or different from the outlet port, as desired. Standard Syntesi⊕ ports are: 1/8", 1/4", 3/8" for size 1; 3/8", 1/2", 3/4", 1" for size 2.

It may be necessary to use a vice to insert the bushes into size 2.

The nipples have different functions:

- Nipple © joins two elements of the same size together.
- Size adaptor © can be used to connect an element in the Syntesi® 2 series with one in the Syntesi® 1 series.
- The 90° adaptor (E) can be used to connect two 90° angled elements. For example, it can help directing the regulator knob or the control knob of a sectioning valve towards the user.
- The two-way air intake @ is a simple and cost-effective system which, besides connecting two elements together, has 2 opposing threaded air intakes.

- The adaptor for Regtronic ® can be used to fix the Regtronic 1/4" proportional valve to a Syntesi® size 1 element.

Additional ports ©. On the front and back of ALL Syntesi® elements there is a port (1/8" for size 1, 1/4" for size 2) that can be used for pressure gauges ©, pressure switches @ or, given the high flow rate, as additional air take-off @. These ports are downstream of the element, so, for example, a regulator port can supply air at a set pressure or a filter port can supply filtered air (not valid for activated carbon filter and depurator).

Wall fixing. Only two through screws @ are needed. No bulky brackets or additional flanges are required. The bracket @ can be used to separate

the unit from the fixing wall, e.g. to mount a fitting to the rear port.

Fixing on a DIN EN50022 bar. Can be done using the bracket kit ①.

Regulator fixing bracket ②. Regulators and filter-regulators can also be fixed using a steel bracket ③ that embraces the bell.

Padlockable knob ®. The knobs of regulators, filter-regulator and sectioning valves can all be padlocked. The steel plate is included in the supply. You can insert up to two 3 mm diameter padlocks ® on size 1 and three padlocks on size 2. As an alternative, the sectioning valve can have a steel plate suitable for a single 6 mm diameter padlock.

Safety valve (S). The unit can incorporate a series 70 SAFE AIR® safety valve.

Flowmeter series FLUX 1-2 (1). The unit can incorporate a series FLUX 1 or FLUX 2 flow meter.
